RESEARCH PROGRAMME - PLANNED WORK
Adapted from the lab project document. Objectives and applications are plans, not completed research findings.

Smart Transportation & Public Infrastructure - Research programme

01 / Scope

Study infrastructure planning, conversational traffic control, dynamic routing, and incentives that improve system efficiency and worker outcomes.

02 / Research questions

How should transit stops, charging networks, and logistics facilities be planned?
How can conversational systems support traffic control and dynamic routing?
How do infrastructure upgrades affect worker safety and digital reputation?

03 / Planned applications

Long-term public-infrastructure planning
Conversational traffic-management prototypes
Mobility incentives and gig-economy studies

04 / Status

Adapted from the lab project programme. Research objectives and applications are plans, not completed findings or deployed systems.
