RESEARCH PROGRAMME - PLANNED WORK
Adapted from the lab project document. Objectives and applications are plans, not completed research findings.

Human-AI Collaboration & Multi-agent Innovation - Research programme

01 / Scope

Study talent development, knowledge transfer, cognitive workload, and the organizational consequences of generative AI and multi-agent systems.

02 / Research questions

How can generative AI make tacit knowledge explicit and support knowledge transfer?
How does AI change peer pressure, promotion, and organizational structure?
Where are the limits of multi-agent systems in research ideation and strategy simulation?

03 / Planned applications

Talent development and knowledge-transfer tools
Human-AI task and cognitive-workload design
Multi-agent prototypes for research and strategy

04 / Status

Adapted from the lab project programme. Research objectives and applications are plans, not completed findings or deployed systems.
